

# Module 4: SEO Reporting

School of Information Science

## Module-4 Syllabus

Website position analysis in various search engine- Analyzing performance of the website using Google analytics- Goals and conversion- Tracking and report- Reports submission- Securing Ranks.

# Session-1: What is Website Position Analysis?

## Definition

**Website Position Analysis** is the process of monitoring, tracking, and evaluating where a website ranks in Search Engine Results Pages (SERPs) for specific keywords across different search engines.

## Why It Matters

- 90% of users never go beyond page 1 of search results
- Position #1 receives 28.5% of all clicks
- Position #10 receives only 2.5% of clicks

# Key Components of Position Analysis

| Component               | Description                                      |
|-------------------------|--------------------------------------------------|
| Keyword Ranking         | Monitoring positions of target keywords          |
| Visibility Score        | Overall share of voice in search results         |
| SERP Features           | Featured snippets, local packs, knowledge panels |
| Share of Voice          | Percentage of clicks vs competitors              |
| Competitor Benchmarking | Comparing rankings against direct competitors    |

**Regular monitoring = Early detection of ranking drops**

## Global Market Share (2024)

- **Google: 91.5%**
- Bing: 3.2%
- Yahoo: 1.2%
- Baidu: 0.8% (China dominant)
- Yandex: 0.5% (Russia)
- DuckDuckGo: 0.6%

## Key Differences

- **Google:** E-E-A-T, Core Web Vitals
- **Bing:** Social signals, meta keywords
- **DuckDuckGo:** Privacy-focused, Bing API
- **Yandex:** Local relevance, behavioral factors

# Rank Tracking Tools Comparison

| Tool                  | Best For          | Price    | Accuracy  |
|-----------------------|-------------------|----------|-----------|
| Google Search Console | Free, accurate    | Free     | High      |
| SEMrush               | Comprehensive     | \$\$\$   | High      |
| Ahrefs                | Backlinks + ranks | \$\$\$   | High      |
| Moz Pro               | Beginner friendly | \$\$     | Medium    |
| AccuRanker            | Speed             | \$\$     | Very High |
| BrightEdge            | Enterprise        | \$\$\$\$ | High      |

**Google Search Console should be your PRIMARY free tool**

# Google Search Console Overview

## Key Metrics in GSC

- **Total Impressions:** How many times your site appeared
- **Total Clicks:** Actual visits from search
- **Average CTR:** (Clicks / Impressions) × 100
- **Average Position:** Mean ranking across all queries

|   |                  |             |        |       |          |
|---|------------------|-------------|--------|-------|----------|
| 1 | Query            | Impressions | Clicks | CTR   | Position |
| 2 | -----            | -----       | -----  | ----- | -----    |
| 3 | seo guide        | 15234       | 1245   | 8.2%  | 4.2      |
| 4 | analytics tools  | 8456        | 892    | 10.5% | 2.8      |
| 5 | website tracking | 5123        | 234    | 4.6%  | 7.1      |
| 6 |                  |             |        |       |          |

Listing 1: GSC Data Export Example

# SERP Features Overview

## Types of SERP Features

- Featured Snippets
- Local Pack
- Knowledge Panel
- People Also Ask
- Image/Video Packs
- Top Stories
- Shopping Results

## Impact

- **Featured Snippets: 35%+ CTR**
- **Local Pack: 44% CTR for local searches**
- **Zero-click searches now >50% of all searches**

**Optimize for SERP features to capture more visibility**

# Session-2: SEARCH ENGINE PERFORMANCE-Google Ranking Factors (E-E-A-T)

## E-E-A-T Framework

- **Experience:** First-hand expertise on the topic
- **Expertise:** Formal knowledge and credentials
- **Authoritativeness:** Recognized as a trusted source
- **Trustworthiness:** Secure, transparent, accurate content

## Critical Factors (2024)

- 1 Core Web Vitals (LCP, INP, CLS)
- 2 Mobile-first indexing
- 3 Content quality and relevance
- 4 Backlink profile quality
- 5 User engagement metrics

# Core Web Vitals Explained

| Metric                          | Description         | Good Threshold |
|---------------------------------|---------------------|----------------|
| LCP (Largest Contentful Paint)  | Loading performance | < 2.5s         |
| INP (Interaction to Next Paint) | Responsiveness      | < 200ms        |
| CLS (Cumulative Layout Shift)   | Visual stability    | < 0.1          |

```
1  {  
2    "lcp": 1.8,  
3    "inp": 156,  
4    "cls": 0.05,  
5    "score": "PASS"  
6  }  
7
```

Listing 2: Core Web Vitals Score Example

◀ ◻ ▶ ◀ ◻ ▶ ◀ ≡ ▶ ◀ ≡ ▶ ≡ ↺ 🔍 ↻

## What is Mobile-First?

Google primarily uses the **mobile version** of your website for indexing and ranking, not the desktop version.

### Requirements

- Responsive design
- Mobile-friendly content
- Same structured data
- Equal meta data
- Fast mobile loading

### Common Mistakes

- Different content on mobile
- Blocked resources (CSS/JS)
- Unplayable videos
- Tiny font sizes

# Bing vs Google: Key Differences

| Factor              | Google             | Bing               |
|---------------------|--------------------|--------------------|
| Meta Keywords       | Ignored            | Considered         |
| Social Signals      | Low impact         | High impact        |
| Exact Match Domains | Penalized          | Beneficial         |
| Page Authority      | DA/PA matters      | Domain age matters |
| Multimedia          | Not ranking factor | Ranking factor     |

**Don't ignore Bing — it powers Yahoo, DuckDuckGo, and 3-5% of US traffic**

# Session-3: Google Analytics 4 (GA4) Introduction

## GA4 vs Universal Analytics

- **Event-based model** (vs session-based in UA)
- Privacy-centric with cookieless tracking
- Cross-platform (web + app) unified view
- Machine learning powered insights
- No more bounce rate (now engagement rate)

## Important Timeline

Universal Analytics stopped processing data on **July 1, 2023**. GA4 is now the standard.

## Event Categories

- Automatically collected
- Enhanced measurement
- Recommended events
- Custom events

```
1      gtag('event', 'purchase', {  
2          currency: 'USD',  
3          value: 129.99,  
4          items: [  
5              {  
6                  item_id: 'SKU_12345',  
7                  item_name: 'Premium Headphones',  
8                  price: 129.99  
9              }  
10         ]  
11     });  
12
```

Listing 3: GA4 Event Structure

**Every user interaction should be an event**

# Key GA4 Metrics Explained

| Metric                  | Definition                                                  |
|-------------------------|-------------------------------------------------------------|
| Users                   | Number of unique visitors (deduplicated)                    |
| Sessions                | Group of user interactions within a time period             |
| Engagement Rate         | % of sessions that lasted >10s, had conversion, or 2+ pages |
| Average Engagement Time | Total engagement time / engaged sessions                    |
| Events per Session      | Average number of events per session                        |
| Conversions             | Number of times users completed a marked event              |

## Default Channels

- 1 Organic Search
- 2 Direct
- 3 Referral
- 4 Social
- 5 Paid Search
- 6 Email
- 7 Display
- 8 Unassigned

| Channel        | Users | Sessions | Conversions |
|----------------|-------|----------|-------------|
| Conv Rate      |       |          |             |
| Organic Search | 45234 | 52345    | 1234        |
| 2.36%          |       |          |             |
| Direct         | 23456 | 28901    | 456         |
| 1.58%          |       |          |             |
| Social         | 12345 | 14567    | 234         |
| 1.61%          |       |          |             |
| Email          | 5678  | 6789     | 567         |
| 8.35%          |       |          |             |
| Paid Search    | 4567  | 5123     | 345         |
| 6.73%          |       |          |             |

Listing 4: GA4 Acquisition Report

## Audience Segments

- **Demographics:** Age, gender, location, language
- **Interests:** Affinity categories, in-market segments
- **Technology:** Device category, browser, OS, screen resolution
- **Behavior:** New vs returning, frequency, loyalty

```
1  {
2    audience_name: "High Value Customers",
3    conditions: [
4      {field: "total_revenue", operator: ">", value: 500},
5      {field: "sessions_count", operator: ">=", value: 3},
6      {field: "days_since_last_purchase", operator: "<", value: 30}
7    ]
8  }
```

Listing 5: Creating Audience in GA4

| Exploration Type   | Use Case                           |
|--------------------|------------------------------------|
| Free Form          | Custom pivot tables and charts     |
| Funnel Exploration | Step-by-step conversion analysis   |
| Path Exploration   | User navigation patterns           |
| Cohort Analysis    | Retention over time                |
| Segment Overlap    | Compare user segment intersections |
| User Lifetime      | LTV analysis across user cohorts   |

**Explorations replace Custom Reports from Universal Analytics**

# Session-4: Goals and Conversions

## Definition

**Goals** measure how well your site completes specific objectives aligned with business outcomes. When a goal is completed, it becomes a **conversion**.

## Why Goals Matter

- Measure ROI of marketing campaigns
- Identify high-performing channels
- Optimize user experience
- Without goals, analytics is just counting visitors

# Types of Goals in GA4

| Type        | Description                   | Example                     |
|-------------|-------------------------------|-----------------------------|
| Destination | User reaches specific page    | Thank-you page after form   |
| Event       | User performs specific action | Button click, video play    |
| Engagement  | Time/pages based              | 3+ pages viewed, 2+ minutes |
| Revenue     | E-commerce transaction        | Purchase completion         |

```
1 gtag('event', 'generate_lead', {  
2   event_category: 'engagement',  
3   event_label: 'contact_form',  
4   value: 50  
5 });  
6
```

Listing 6: Setting Up a Destination Goal (Event)

# Micro vs Macro Conversions

## Macro Conversions

- Primary business objectives
- Direct revenue impact
- Purchases
- Form submissions
- Paid signups

## Micro Conversions

- Step toward macro goals
- Engagement indicators
- Newsletter signups
- Account creation
- White paper downloads
- Video views

**Both are essential — micro conversions show path to macro goals**

# Setting Up Conversions: Step-by-Step

- 1 Identify key user actions to track
- 2 Implement event tracking (GTM or gtag.js)

```
1 gtag('event', 'contact_form_submit', {  
2   'form_type': 'contact',  
3   'form_location': 'footer'  
4 });  
5
```

- 3 Navigate to GA4 ☐ Configure ☐ Events
- 4 Find your event and toggle **”Mark as conversion”**
- 5 Wait 24-48 hours for data to populate

**Conversions can be imported from Google Ads for bid optimization**

# Key Conversion Metrics

| Metric           | Formula                                                | Insight                |
|------------------|--------------------------------------------------------|------------------------|
| Conversion Rate  | $(\text{Conversions} / \text{Sessions}) \times 100$    | Overall performance    |
| Goal Completions | Total conversions                                      | Volume of success      |
| Goal Value       | Sum of assigned values                                 | ROI measurement        |
| Abandonment Rate | $(\text{Started} - \text{Completed}) / \text{Started}$ | Friction points        |
| ROAS             | Revenue / Ad Spend                                     | Advertising efficiency |

**Benchmark: 2-5% conversion rate is average for e-commerce**

## What is a Funnel?

A **funnel** visualizes the step-by-step journey users take toward a conversion, showing where they drop off.

|                        |                        |            |
|------------------------|------------------------|------------|
| Step 1: Product View   | → 100,000 users (100%) |            |
| Step 2: Add to Cart    | → 25,000 users (25%)   | [75% drop] |
| Step 3: Checkout Start | → 15,000 users (15%)   | [40% drop] |
| Step 4: Payment Info   | → 12,000 users (12%)   | [20% drop] |
| Step 5: Purchase       | → 10,000 users (10%)   | [17% drop] |

Listing 7: E-commerce Funnel Example

**Identify drop-off points** □ **Optimize those pages**

# Enhanced E-commerce Tracking

## Trackable Actions

- Product impressions
- Product clicks
- Add to cart
- Remove from cart
- Checkout steps
- Purchases
- Refunds

## Data Captured

- Product ID, name, category
- Price, quantity, discount
- Revenue, tax, shipping
- Coupon codes
- Transaction ID

```
1 gtag('event', 'view_item', {  
2   'items': [{  
3     'item_id': 'SKU_123',  
4     'item_name': 'Premium Headphones',  
5     'price': 129.99  
6   }]  
7 });  
8
```

# Session-5: Tracking Implementation Methods

| Method               | Best For                  | Complexity |
|----------------------|---------------------------|------------|
| gtag.js (Direct)     | Simple pageview tracking  | Low        |
| Google Tag Manager   | All tracking without code | Medium     |
| Server-side GTM      | Privacy, ad blockers      | High       |
| Measurement Protocol | Offline/backend tracking  | High       |

## Recommendation

Use **Google Tag Manager** as it provides flexibility without requiring developer deployment for every change.

# Google Tag Manager (GTM) Architecture

## GTM Components

- **Tags:** Code snippets (GA4, Facebook Pixel, etc.)
- **Triggers:** Conditions that fire tags
- **Variables:** Dynamic values (URL, click text, etc.)

# GA4 Setup via Google Tag Manager

```
1  {
2    "tag_type": "Google Analytics: GA4 Configuration",
3    "measurement_id": "G-XXXXXXXXXX",
4    "fields_to_set": {
5      "send_page_view": true
6    }
7  }
8
```

Listing 8: GA4 Configuration Tag

- ❶ Create new tag ☐ GA4 Configuration
- ❷ Enter Measurement ID
- ❸ Set trigger to "All Pages"
- ❹ Publish container

```
1  {
2    "tag_type": "Google Analytics: GA4 Event",
3    "event_name": "button_click",
4    "event_parameters": {
```

```
8  }
9
```

Listing 9: GA4 Event Tag Example

# Event Tracking: Code Examples

```
1 gtag('event', 'form_submit', {  
2   'event_category': 'lead_generation',  
3   'event_label': 'contact_page',  
4   'value': 50  
5 });  
6
```

Listing 10: Direct gtag.js Event

```
1 // Push to dataLayer before tag fires  
2 dataLayer.push({  
3   'event': 'form_submit',  
4   'form_id': 'contact-form',  
5   'form_location': 'footer'  
6 });  
7
```

Listing 11: GTM Custom Event via DataLayer

```
1 document.getElementById('cta-button').addEventListener('click', function() {  
5   });  
6 });  
7
```

Listing 12: Click Event with Parameters

# UTM Parameters for Campaign Tracking

| Parameter    | Purpose          | Example                      |
|--------------|------------------|------------------------------|
| utm_source   | Traffic source   | google, newsletter, facebook |
| utm_medium   | Marketing medium | cpc, email, social, organic  |
| utm_campaign | Campaign name    | spring_sale_2024             |
| utm_term     | Paid keyword     | seo_tools, analytics         |
| utm_content  | Ad variant       | banner_a, text_ad            |

```
1 https://example.com/landing-page?  
2 utm_source=google&  
3 utm_medium=cpc&  
4 utm_campaign=summer_sale&  
5 utm_term=seo+tools&  
6 utm_content=text_ad_v2  
7
```

Listing 13: Complete UTM URL Example

**Consistent UTM naming convention is CRITICAL for accurate reporting**

## Why Server-Side Tracking?

- Bypass ad blockers (client-side blocking)
- GDPR/CCPA compliance
- Better data ownership
- Improved site performance
- More reliable tracking

## Implementation

Server-side GTM runs on cloud infrastructure (Google Cloud, AWS) and sends data directly to analytics platforms, bypassing the browser.

# Session-6: Reporting Framework

## The 3-Tier Reporting Approach

- 1 **Operational Reports:** Daily/weekly — tactical insights
- 2 **Tactical Reports:** Monthly — channel performance
- 3 **Strategic Reports:** Quarterly — business impact

| Frequency | Audience       | Content                           |
|-----------|----------------|-----------------------------------|
| Daily     | SEO/Paid teams | Anomaly alerts, real-time metrics |
| Weekly    | Marketing team | Trends, campaign adjustments      |
| Monthly   | Management     | Performance summary, ROI          |
| Quarterly | Leadership     | Strategic review, forecasting     |

# Executive Dashboard Components

## Must-Have Metrics

- Total Users & Sessions
- Conversion Rate
- Total Revenue
- ROAS (Return on Ad Spend)
- Organic Traffic Trends
- Top Performing Channels

**Keep executive dashboards to 5-7 key metrics only**

## Visualization Types

- Line charts for trends
- Pie/bar for channel breakdown
- Gauges for goal progress
- Heatmaps for engagement

# Google Looker Studio for Reporting

## Benefits of Looker Studio

- Free and interactive
- Connect multiple data sources
- Automated data refresh
- Shareable with team/stakeholders
- Embeddable in websites/intranet

### Data Sources:

```
1      Google Analytics 4
2      Google Search Console
3      Google Ads
4      Google Sheets
5      BigQuery
6      YouTube Analytics
7      Third-party (via connectors)
```

ces in Looker Studio

# SEO Report Template

## 1 Executive Summary (2-3 sentences)

- +15% organic traffic YoY
- Algorithm update caused 8% dip in week 3

## 2 Organic Traffic Overview

- Sessions: 45,234 (+12%)
- New Users: 38,123 (+10%)
- Engagement Rate: 68% (+5%)

## 3 Keyword Rankings

- Top 3 keywords: 45 (+8)
- Average position: 8.2 (+1.5)
- Featured snippets gained: 12

## 4 Technical Health

- Core Web Vitals pass rate: 92%
- Crawl errors: 12 (-8)
- Mobile usability issues: 0

## 5 Recommendations

- Update top 10 declining pages
- Build backlinks to new product pages

# Marketing Channel Performance Report

| Channel      | Spend           | Revenue          | ROAS         | Conv Rate   |
|--------------|-----------------|------------------|--------------|-------------|
| Organic      | \$0             | \$125,000        | N/A          | 3.2%        |
| Paid Search  | \$15,000        | \$85,000         | 5.67x        | 4.1%        |
| Social       | \$8,000         | \$32,000         | 4.00x        | 2.3%        |
| Email        | \$2,000         | \$28,000         | 14.00x       | 8.5%        |
| Display      | \$5,000         | \$12,000         | 2.40x        | 1.1%        |
| <b>Total</b> | <b>\$30,000</b> | <b>\$282,000</b> | <b>9.40x</b> | <b>3.4%</b> |

**Email and Organic show highest efficiency — invest accordingly**

# Report Submission Best Practices

- 1 **Automate** data refresh where possible
- 2 **Visualize** data (charts > tables)
- 3 **Provide context** — explain why numbers changed
- 4 **Action-oriented** insights, not just data
- 5 **Consistent format** for easy comparison
- 6 **Annotate** major changes (algorithm updates, campaigns)
- 7 Include **what went wrong** and **what improved**

## Golden Rule

Never submit raw data without analysis. Stakeholders want **insights**, not numbers.

# Using Annotations for Context

```
1 Date: March 15, 2024
2 Annotation: "Core Web Vitals update rolled out"
3 Impact: 8% decrease in mobile rankings, recovered by March 22
4
5 Date: April 1, 2024
6 Annotation: "Spring Sale Campaign Started"
7 Impact: 45% increase in traffic, 12% conversion rate
8
```

Listing 15: GA4 Annotations Example

## Why Annotations Matter

- Explain anomalies in data
- Build institutional knowledge
- Prevent incorrect conclusions
- Document testing and experiments

Navigation icons: back, forward, search, etc.

# Session-7: Securing Ranks

## Definition

**Securing Ranks** refers to maintaining and protecting achieved search engine rankings against:

- Competitor movements
- Algorithm updates
- Technical issues
- Negative SEO attacks

## Key Insight

**Achieving rankings is hard; maintaining them is equally challenging**

# Rank Protection Framework

- ① **Monitor:** Daily rank tracking, GSC alerts, competitor changes
- ② **Analyze:** Identify causes, correlate with updates, technical audit
- ③ **Respond:** Update content, fix issues, build authority
- ④ **Document:** Log changes, track recovery, build knowledge

# Continuous Rank Monitoring

## What to Monitor

- Daily position changes
- SERP feature presence
- Competitor movements
- Algorithm update alerts
- Technical SEO health
- Backlink profile

**Set up automated alerts for significant rank changes (>3 positions)**

## Monitoring Tools

- Google Search Console
- SEMrush Position Tracking
- Ahrefs Alerts
- CognitiveSEO
- ContentKing
- Moz Pro

# Algorithm Update Preparedness

## Major Google Updates to Watch

- Core Updates (multiple per year)
- Product Reviews Update
- Helpful Content Update
- Spam Updates
- Local Search Updates

## Recovery Strategy

- 1 Wait 2-3 weeks after update
- 2 Analyze which pages/sites were affected
- 3 Identify the intent of the update
- 4 Audit content against update guidelines
- 5 **Improve E-E-A-T, not just keywords**

# Competitor Analysis for Rank Protection

| Competitor | Position Change | New Content  | Backlinks Gained | Actions |
|------------|-----------------|--------------|------------------|---------|
| -----      | -----           | -----        | -----            | -----   |
| Site A     | +5 positions    | 15 new pages | 45 new links     | THREAT  |
| Site B     | -2 positions    | 3 new pages  | 12 lost links    |         |
| Site C     | +8 positions    | 2 new pages  | 89 new links     |         |

Listing 16: Competitor Analysis Matrix

## When a Competitor Outranks You

- 1 Analyze their content depth and freshness
- 2 Check their backlink profile
- 3 Review their technical SEO
- 4 Identify what they have that you don't
- 5 Create superior content

## Refresh Strategy

- Update top 20% performing pages quarterly
- Add new statistics and data
- Expand thin content
- Update publication dates
- Add multimedia elements
- Internal linking to new content

```
1  [ ] Update statistics to current year
2  [ ] Add new examples/case studies
3  [ ] Expand sections with low word count
4  [ ] Add internal links to newer content
5  [ ] Update meta title and description
6  [ ] Add schema markup if missing
7  [ ] Republish with current date
8
```

## Content Refresh Checklist

# Backlink Profile Maintenance

## Healthy Backlink Practices

- Regular link audits (monthly)
- Disavow toxic/spammy links
- Monitor lost backlinks
- Build high-quality new links
- Reclaim broken links

## Tools for Backlink Monitoring

- Ahrefs
- SEMrush
- Majestic
- Moz Link Explorer
- Google Search Console

```
1 # Disavow toxic domains
2 domain:spam-site.com
3 domain:low-quality-directory.net
4
5 # Disavow specific URLs
6 http://example.com/bad-link-page
7
```

Listing 18: Disavow File Format

| Audit Item       | Frequency | Tools                   |
|------------------|-----------|-------------------------|
| Crawl errors     | Weekly    | GSC, Screaming Frog     |
| Broken links     | Weekly    | Screaming Frog, Ahrefs  |
| Redirect chains  | Monthly   | Screaming Frog          |
| Core Web Vitals  | Monthly   | PageSpeed Insights, GSC |
| Index coverage   | Weekly    | Google Search Console   |
| Mobile usability | Monthly   | GSC Mobile Usability    |

**Fix technical issues BEFORE they impact rankings**

# Protecting Against Negative SEO

## What is Negative SEO?

Malicious attempts to harm a competitor's rankings through:

- Toxic backlink building
- Content scraping
- Hacking/defacing
- Fake DMCA takedowns
- Fake reviews

## Protection Measures

- Monitor backlink profile weekly
- Set up Google Alerts for brand mentions
- Use security monitoring (Sucuri, Cloudflare)
- Regular malware scans

## SERP Features to Protect

- Featured Snippets
- Image/Videos Packs
- Local Pack (for local SEO)
- People Also Ask boxes
- Site Links

### Featured Snippet Protection

- Maintain structured content
- Keep Q&A format
- Monitor competitors
- Update frequently

### Local Pack Protection

- Keep GBP updated
- Respond to reviews
- Maintain NAP consistency
- Post regularly

# Session-8: Integrated SEO Performance Strategy

**Continuous cycle of analysis, optimization, and protection**

# Monthly SEO Scorecard Template

| Metric               | Target | Current | Status                   |
|----------------------|--------|---------|--------------------------|
| Organic Sessions     | 50,000 | 52,345  | <input type="checkbox"/> |
| Avg. Position        | < 8.0  | 7.2     | <input type="checkbox"/> |
| Conversion Rate      | 3.5%   | 3.2%    | <input type="checkbox"/> |
| Core Web Vitals Pass | 90%    | 88%     | <input type="checkbox"/> |
| Top 3 Keywords       | 50     | 48      | <input type="checkbox"/> |
| Backlinks (DR>50)    | 200    | 215     | <input type="checkbox"/> |

## Actions for Next Month:

- Improve Core Web Vitals on product pages
- Optimize conversion funnel for checkout

# Session-9: Essential Tools Summary

| Category          | Tools                                     |
|-------------------|-------------------------------------------|
| Rank Tracking     | GSC, SEMrush, Ahrefs, AccuRanker          |
| Analytics         | GA4, Looker Studio, Adobe Analytics       |
| Technical SEO     | Screaming Frog, Sitebulb, DeepCrawl       |
| Backlink Analysis | Ahrefs, SEMrush, Majestic                 |
| Performance       | PageSpeed Insights, GTmetrix, WebPageTest |
| Tag Management    | Google Tag Manager, Tealium               |
| Reporting         | Looker Studio, Supermetrics, Tableau      |

- 1 **Enable Enhanced Measurement** for automatic event tracking
- 2 **Set up cross-domain tracking** for multi-domain properties
- 3 **Use Google Tag Manager** for flexibility
- 4 **Mark key events as conversions** (up to 30)
- 5 **Set up custom audiences** for remarketing
- 6 **Link to Google Search Console** for organic data
- 7 **Import Google Ads data** for complete view
- 8 **Never delete events without archiving data first**

# SEO Best Practices for Rank Security

## Do's

- Create high-quality, original content
- Focus on user intent
- Optimize for mobile first
- Build natural backlinks
- Monitor technical health
- Regular content updates

## Don'ts

- Keyword stuffing
- Paid link schemes
- Cloaking
- Thin content
- Auto-generated content
- Exact match anchor overuse

# Common Analytics & SEO Mistakes

- 1 Not setting up goals/conversions
- 2 Ignoring Google Search Console data
- 3 Using inconsistent UTM parameters
- 4 Not filtering internal traffic
- 5 Not annotating changes in GA4
- 6 Focusing only on rankings, not conversions
- 7 Not monitoring competitor movements
- 8 Neglecting Core Web Vitals

## Pro Tip

**Data without action is just noise. Always tie analytics to actionable insights.**

# Key Performance Indicators by Goal

| Business Goal      | KPIs to Track                                            |
|--------------------|----------------------------------------------------------|
| Brand Awareness    | Impressions, New Users, Direct Traffic, Branded Searches |
| Engagement         | Engagement Rate, Avg. Engagement Time, Pages/Session     |
| Lead Generation    | Conversion Rate, Goal Completions, Cost per Lead         |
| Sales/E-commerce   | Revenue, AOV, ROAS, Cart Abandonment Rate                |
| Customer Retention | Returning Users, Loyalty Segments, Lifetime Value        |

# Session-10: Key Takeaways

- 1 **Position analysis is the foundation** — you can't optimize what you don't track
- 2 **GA4 is event-based** — adapt your tracking strategy accordingly
- 3 **Goals define success** — without them, analytics is just counting
- 4 **Implement proper tracking** — GTM + UTM = accurate data
- 5 **Reports need insights** — not just data dumps
- 6 **Rank security is proactive** — monitor, analyze, respond, document

## Principles to Live By

- **Measure what matters** — align with business goals
- **Trust but verify** — validate your data
- **Context is everything** — explain the “why”
- **Continuous improvement** — always test and optimize
- **Document everything** — build institutional knowledge

“Without data, you’re just another person with an opinion.”

# Final Recommendations

- 1 Set up **Google Search Console** and **GA4** immediately
- 2 Define **5-10 key conversions** that align with business goals
- 3 Create a **GTM container** for all tracking tags
- 4 Establish **weekly reporting cadence** with stakeholders
- 5 Implement **daily rank monitoring** for top 100 keywords
- 6 Conduct **monthly technical SEO audits**
- 7 Build a **competitor monitoring system**
- 8 Document all changes and **annotate GA4**
